

Microsoft Azure App Consults

Collaborative expert consultation for your developers

Microsoft is committed to helping customers succeed with Azure. With Azure App Consults, you can provide your development team with the tools and expertise to architect, design, implement, migrate, or grow your applications on the Microsoft Azure platform.

Microsoft engineers specializing in Azure technologies and services will provide your team with deep technical guidance on how to best use Azure capabilities, customized and aligned with your organization's goals. You will receive customized technical guidance through interactive Skype sessions and receive a summary report with a detailed action plan.

Key benefits

-  Technical Expertise
-  Customized Guidance
-  Development Optimization

Receive customized architecture guidance

Define your cloud development strategy. Our consultants can provide technical guidance on how to best use Azure capabilities, customized and aligned with your organization's goals.

- Interactive Skype sessions enable you to work directly with our Azure Consultants
- Customized white-boarding and prototyping allows you to discuss architecture possibilities and review total cost of ownership options

Assistance with Azure development and implementation

Reduce development time and improve deployments. Our consultants can coach you through key implementation steps to help you develop your action plan.

- Sample scripts and feature parity examples help jumpstart your coding projects
- Code tips and troubleshooting can help you resolve development roadblocks
- Best practices for instrumentation can help you monitor your production application

Optimize your Azure development projects

Stay informed with the latest Azure capabilities and tune your cloud development project to maximize your impact.

- Collaborate with your consultant to understand new services and features to keep you up-to-date on the latest Azure technology
- Go deeper with monitoring and diagnostic tools that can help tune your code to optimize application performance
